NEW ARTIST – GORDON S

Swedish artist Gordon S. captures gesture and emotion – to get beyond the surface in his paintings of people and landscapes. He paints in oil on untreated wood. The unique patterns of the grain provide movement and texture visible beneath the paint, and often serve as pictorial elements.

He also works with metal sculpture, using a combination of silhouette and natural surroundings to create interesting and immersive pieces.

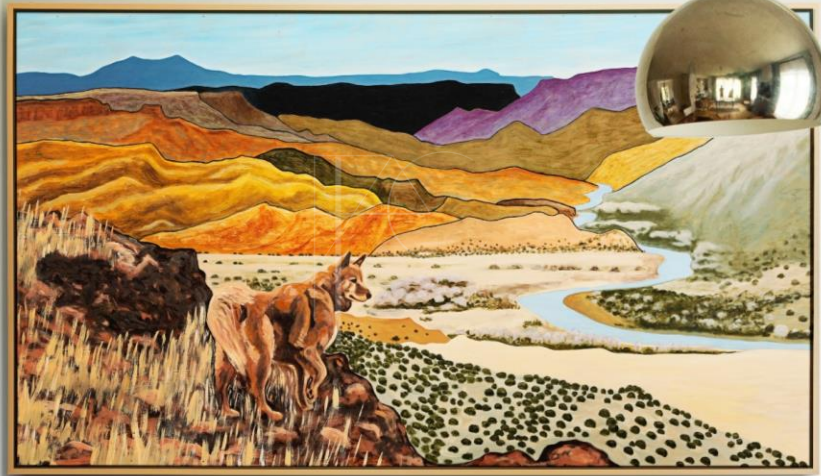

FAC

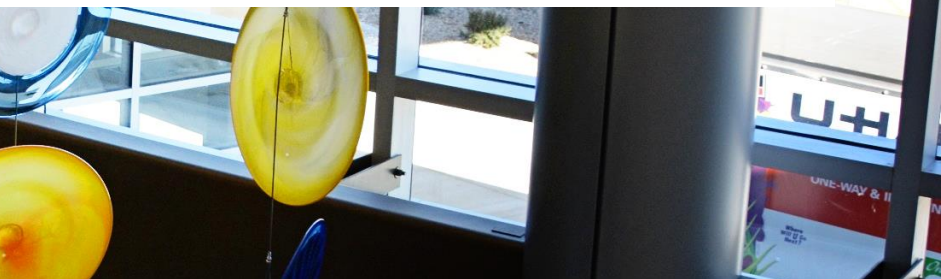

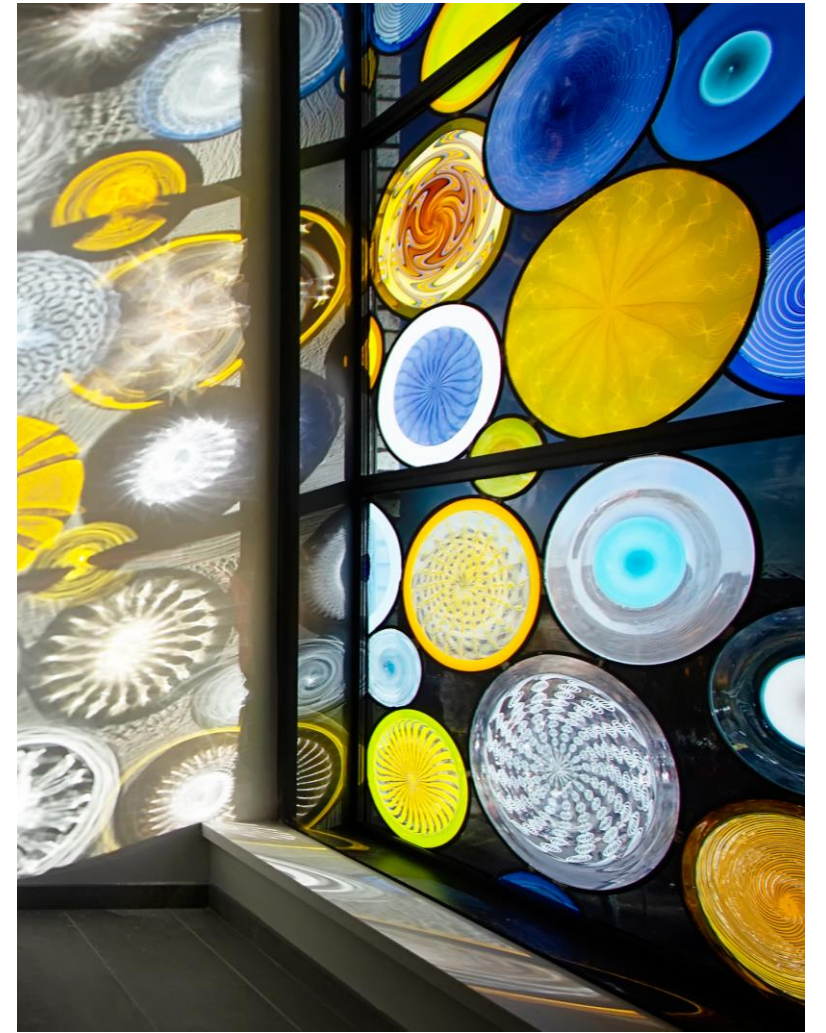

NEW ARTIST - TYLER K

“Architecture and pattern always inspires me in my designs. I like each installation of glasswork or individual piece to have it's own voice and personality, attaching itself to the place it lives and the people who view it.”

Light, color, pattern, movement, and depth are all aims in my work. I look to the natural optical qualities within glass to find these objectives come through in every piece I create. I look to use either natural light or artificial light to enhance colors and depth. I also work towards giving the viewer a different piece with each new angle or step taken.
